

Laundry Box leverages emQube expertise to bring in a revolution

Company : Laundry Box

Application : Completed Software System for Business Operations

Key Benefits : Single solution with multiple user interface channels
Real time communication of data across multiple platforms
Integrated payment system

Technology : Microsoft ASP.Net Web and Desktop System C#,

Applications' Key Features

- Web and Kiosk System with complete Front end and Laundry Operations
- Payment Gateway with Kiosk and Website
- Mobile App Integration for Customer and Courier

Technology

The application is deployed on IIS 6.0 web server with SQL Server 2005.

Company

Laundry Box is an innovative home laundry service leveraging technology to usher a revolution in the laundry industry. The company operates a high-tech laundry service incorporating a website, kiosk controlled lockers and mobile apps.

Application

Laundrybox.com is the web interface to this comprehensive solution powering the revolutionary home laundry service concept introduced in UAE and now expanding to other countries.

The software system runs the Kiosk that control the lockers placed in building premises for customers to deposit dirty laundry in lockers and pick up clean and pressed laundry a day later from the same lockers.

Customers interact with the web interface and the kiosk seamlessly for booking lockers or home pick-up, paying online for services, updating laundry preferences and claiming loyalty points.

emQube developed the entire system including the laundry operations that manage the movement of the laundry from pickup to tagging to delivery back to the locker.
